PRODUCT INFORMATION								
			<p>It is a chamber part that is a key component that constitutes a high-pressure flooded multi-stage hydraulic pump installed in tanks such as machine tools and used by flooding the pump part in the used liquid. It has the advantage of being able to adjust the depth of flooding of the pump part by combining the number of chamber products and the number of impellers in the multi-stage hydraulic pump.</p>					
SPACE CHAMBER								
COMPANY OVERVIEW					Competitiveness & Sales Points			
<p>Eunhye Co., Ltd. is a manufacturer specializing in automobile body parts and manufactures and delivers more than 190 types of automobile body parts that are applied to various models using press and welding.</p>					<p>Currently, there is no manufacturing technology for chamber products applied to multistage hydraulic pumps in Korea. For this reason, demanding companies are importing all of them from foreign countries at a high price. The chamber product developed by us secured watertightness at high pressure only by mechanical fastening without a separate bonding process by applying a composite curling process to the assembly section when stacking multiple stages. In addition, it can be delivered at a lower price than the importer.</p>
