| PRODUCT INFORMATION  |  |                               |  |  |   |                        |   |      |
|   |  |                               | ◎ Description :<br>It is based on refined mineral oil and thickened by urea. It has an excellent anti-wear and low coefficient of friction property for the exclusive use of C.V. (Constant Velocity) Joint. It maintains a low coefficient of friction between metal materials under extreme pressure, and so it minimizes abrasion and protects a flaking phenomenon in C.V Joint. Also, it protects the abnormal-noise and vibration.   |  |   |                        |   |      |
| Driveshaft (CVJ) grease (CXD-150)  |  |                               | ◎ Characteristic :<br>Excellent anti-wear and low friction / Good oxidation stability / Heat resistance and anti-corrosion   |  |   |                        |   |      |
|    |  |                               | ◎ Description :<br>It is PAG(Polyalkylenglycol) based grease thickened with Lithium-soap to show good compatibility with rubber. Excellent thermal stability provides stable property under high-temp, comparing to the same kind of greases, and water-insoluble PAG guarantees good resistance to water wash-out. Also, excellent resistance to brake oil makes well suited for Brake System. CASMOLY ML-701 increase the duration in application part with good anti-friction and wear. |  |   |                        |   |      |
| Brake grease (ML-701)  |  |                               | ◎ Characteristic :<br>Excellent quality-stability / High temperature-stability / Excellent oxidation-stability / Excellent Water resistance / Excellent lubrication efficiency   |  |   |                        |   |      |
|   |  |                               | ◎ Description :<br>It is designed for starter motor grease based on high grade lithium-complex soap which is added special solid lubricants. It has good anti-corrosion and oxidation stability properties so that can provide long-term lubrication service for automotive and electrical plastic parts. It has excellent low temperature property and high-load carrying capacity.   |  |   |                        |   |      |
| Starter motor grease (CM-55)   |  |                               | ◎ Characteristic :<br>Excellent Extreme pressure property / Anti-wear property / Good oxidation stabilit / Good corrosion protection / Long term lubrication / Low temperature capacity  |  |   |                        |   |      |
| COMPANY OVERVIEW   |  |                               |  |  | Competitiveness & Sales Points  |                        |   |      |
| CALS Corporation is a Specialty Lubricants manufacturer engaged in various application for lubricant for automobile, electric/electrical, steel industry and all kind of industrial parts.<br>With 44 years of technical know-how and experiences, we have been supplying high quality products to major tier-1 automotive companies around the world.<br>Own brand 'CASMOLY' has a product line of various application fields such as Special purpose greases / Multi-purpose greases / Automotive greases / Plastic greases / High temp. greases (for Steel Industry) / Low friction & EP / Silicone greases & Silicone compounds / Paste & Spray / Oil(chain oil, gear oil, etc.) / Anti-friction coating / Heavy load & Low speed / Thermal stability grease |  |                               |  |  | 1. It is possible to develop lubricating grease according to the upgrade of automobile parts and to secure the same quality as global competitors.<br>2. Contributing to maximizing cost down at a competitive and reasonable price compared to other competitors.<br>3. Construct Korea's best competitive power in automobile drive (CVJ_constanct velocity joint) part.<br>4. Rapid customized development is possible.<br>5. Focusing on quality maintenance/improvement, prior development by investing more than 10% of sales in R&D. |                        |   |      |
